

Grass Weeds

Barnyardgrass

Common: Barnyardgrass (also known as watergrass)

Scientific: *Echinochloa crus-galli*

Affected Crops: Cotton, soybeans, tobacco.

Identification: Vigorous, warm season summer annual that can grow to 3 feet tall. The seedling has smooth leaves and leaf sheath. Leaf blades are flat, broad, and smooth. Panicles and stem bases usually have a dark red or purplish tint. Spikelets are crowded.

Geographical Distribution: Throughout the United States. It has become widespread and is particularly a problem in irrigated crops.

Always refer to product labels for specific use instructions.
